

BAB 1. THREE MODALITIES OF FUTURE EXPRESSION IN TECH PROJECTS

Professional technical communication demands clarity when stating future schedules, system predictions, and immediate operational commitments:

Future Structure	Syntactic Pattern	Degree of Intention & Evidence	Technical Engineering Context	Concrete Professional Example
Will + V1	Subject + will + Verb 1	Instant decision made at the moment of speaking, or formal contract commitment.	Live incident response during on-call triage or code review standup.	"I see the server error alert; I will inspect the logs immediately."
Be going to + V1	Subject + am/is/are + going to + V1	Premeditated plan, or strong projection based on visible real-time empirical evidence.	Sprint roadmap milestones or telemetry dashboards warning of impending limits.	"Look at the memory graph reaching 98%; the container is going to run out of memory! "
Present Continuous for Future	Subject + am/is/are + V-ing	Fixed arrangement with external stakeholders at a confirmed future time slot.	Maintenance downtime windows, client feature demos, cloud migration schedules.	"Our DevOps team is migrating the database to AWS RDS next Saturday at midnight."

BAB 2. MODAL AUXILIARIES FOR SYSTEM REQUIREMENTS (RFC 2119 STANDARD)

In standard engineering documentation (such as IETF RFCs and ISO software specifications), modal auxiliaries carry strictly defined legal meanings:

RFC Keyword	Modal Verb	Architectural Requirement Level	System Specification Example
MUST / REQUIRED	must / have to	Absolute requirement; violation breaks compatibility or security.	"All passwords must be hashed using bcrypt with work factor ≥ 12."
SHOULD / RECOMMENDED	should / ought to	Strong recommendation; valid reasons may exist in particular cases to ignore it, but full implications must be weighed.	"The backend API should implement rate-limiting on login endpoints."
MAY / OPTIONAL	may / can	Truly optional feature; implementations must interoperate whether present or not.	"The client application may cache static assets in localStorage for offline access."
