

# Master Guide: Professional Self-Introduction, Tech Profiling & Present Simple Mechanics

Bahasa Inggris 1 • Pertemuan 1

## BAB 1. THE BIG PICTURE: PRESENT-PAST-FUTURE FORMULA FOR TECH PROFESSIONALS

In international technical interviews, professional networking events (LinkedIn, GitHub), and academic symposiums, delivering a concise elevator pitch is essential. The industry-standard structure is the **Present-Past-Future Formula**:

### The 3-Part Pitch Formula:

- PRESENT (Current Status)**: Who you are right now and your current technical domain.
- PAST (Foundation & Experience)**: Projects built, technologies mastered, or challenges overcome.
- FUTURE (Vision & Goals)**: What you aim to contribute, solve, or learn next.

## BAB 2. SCRIPT MODEL & INDUSTRY DIALOGUE TRANSCRIPT

### Professional Profile Script Sample:

"Good morning, everyone. My name is **Muhammad Haikal**. I am currently an undergraduate student in **Information Systems at Universitas Indraprasta PGRI (Unindra)**. [PRESENT]  
Over the past year, I have built web-based digital archive tools and explored algorithm optimization using Pascal and modern JavaScript frameworks. [PAST]  
Moving forward, I aim to specialize in scalable full-stack software architecture and cloud database systems to contribute effectively to high-impact enterprise solutions. [FUTURE]"

## BAB 3. GRAMMAR FOUNDATION: PRESENT SIMPLE MECHANICS & SUBJECT-VERB AGREEMENT

The Present Simple is the workhorse of technical writing, used to describe **general truths, system specifications, permanent states, and habitual routines**:

| Subject Category             | Affirmative (+)            | Negative (-)                | Interrogative (?) | Engineering Example                                              |
|------------------------------|----------------------------|-----------------------------|-------------------|------------------------------------------------------------------|
| I / You / We / They (Plural) | S + Verb 1 + Object        | S + do not (don't) + V1     | Do + S + V1?      | "We deploy microservices using Docker containers."               |
| He / She / It (Singular)     | S + Verb 1 (s/es) + Object | S + does not (doesn't) + V1 | Does + S + V1?    | "The PostgreSQL database handles ACID transactions efficiently." |

### Rules for Adding -s / -es to Third-Person Singular Verbs:

- Verbs ending in *-ch, -sh, -ss, -x, -z, -o*: add **-es** (*watches, pushes, passes, fixes, goes*).
- Verbs ending in *consonant + y*: change y to i and add **-es** (*queries, studies, modifies*).
- Verbs ending in *vowel + y*: simply add **-s** (*plays, displays*).

## BAB 4. EXAM TRAPS & TECHNICAL VOCABULARY (ADVERBS OF FREQUENCY)

### ⚠ Placement of Adverbs of Frequency:

Adverbs of frequency (*always, usually, often, frequently, rarely, never*) must be positioned:

- BEFORE** main verbs: "The caching server **always** responds in under 10 milliseconds."
- AFTER** auxiliary / to-be verbs: "The backup cron job is **never** skipped during maintenance."
