

BAB 1. EXPRESSING FUTURE INTENT IN SOFTWARE ENGINEERING

Professional technical communication requires clear distinctions when expressing future plans, commitments, and empirical projections:

Modal Structure	Grammar Pattern	Degree of Certainty & Intent	Software Engineering Context	Concrete Professional Example
Will + V1	Subject + will + Verb 1	Spontaneous decision made at the moment of speaking; formal commitment or promise.	Responding to live bug alerts in standup meetings or code review feedback.	"I see the memory leak in the staging server; I will inspect the logs immediately."
Be going to + V1	Subject + am/is/are + going to + Verb 1	Premeditated plan / intention, or strong projection based on visible empirical evidence.	Sprint roadmap planning or real-time diagnostic telemetry monitoring.	"Look at the CPU utilization spike (99%); the Kubernetes pod is going to crash! "
Present Continuous for Future	Subject + am/is/are + V-ing	Fixed future arrangement with external parties and scheduled timestamp.	Scheduled client demos, production deployment maintenance windows.	"We are migrating the core SQL database to AWS RDS next Saturday at midnight."
